

Why?

- If you want to determine gender gap in Free Software projects or mailing lists
- If you don't know the gender about a name in Spanish or English
- If you want research with statistics about why a name is related with males or females.
- If you want use the main solutions in gender detection (genderize, genderapi, namsor, nameapi and gender guesser) from a command.

Reducing the gender gap. How? (I)

Create Free Software tools to determine gender in Internet can help to reduce the gender gap in the world

Basic usages

```
$python3 main.py David
$python3 main.py Mesa --ml = nltk
$python3 nameincountries.py David
$python3 api2gender.py Leticia api = genderapi
```

Easy Installation and Testing

```
$ pip3 install damegender[all]
$ python3 apikeyadd.py
$ cd src/damegender & nosetest3 test
$ ./testsbycommands.sh & ./testsbycommandsextralocal.sh
```

Statistics

```
$ python3 infofeatures.py
$ python3 confusion.py
$ python3 errors.py csv="files/names/all.csv"
api="genderguesser"
$ python3 pca-components.py csv="files/features_list.csv"
$ python3 pca-features.py
$ python3 accuracy.py api="genderguesser" measure="recall"
csv=files/names/allnoundefined.csv
```

Open Datasets

- INE.es (Spanish) census names
- United Kingdome census
- USA census
- Uruguay census
- Ireland census
- GenderGuesser
- NLTK
- Wikidata

Reducing the gender gap. How? (II)

Measuring gender gap in software repositories and taking actions about it can help to reduce the gender gap in the world
